# Neural Style Transfer

---

What are deep  
ConvNets learning?

# Visualizing what a deep network is learning

Pick a unit in layer 1. Find the nine image patches that maximize the unit's activation.

Repeat for other units.

# Visualizing deep layers

Layer 1

Layer 2

Layer 3

Layer 4

Layer 5

So this is nine different representative neurons and for each of them the nine image patches that they maximally activated on.

So this gives a sense that units trained hidden units in layer one are often looking for relatively simple features, such as an edge or particular shade of color
