Hyperparameters tuning

Hyperparameters tuning in practice: Pandas vs. Caviar

deeplearning.ai

# Re-test hyperparameters occasionally

Idea

Experiment

Code
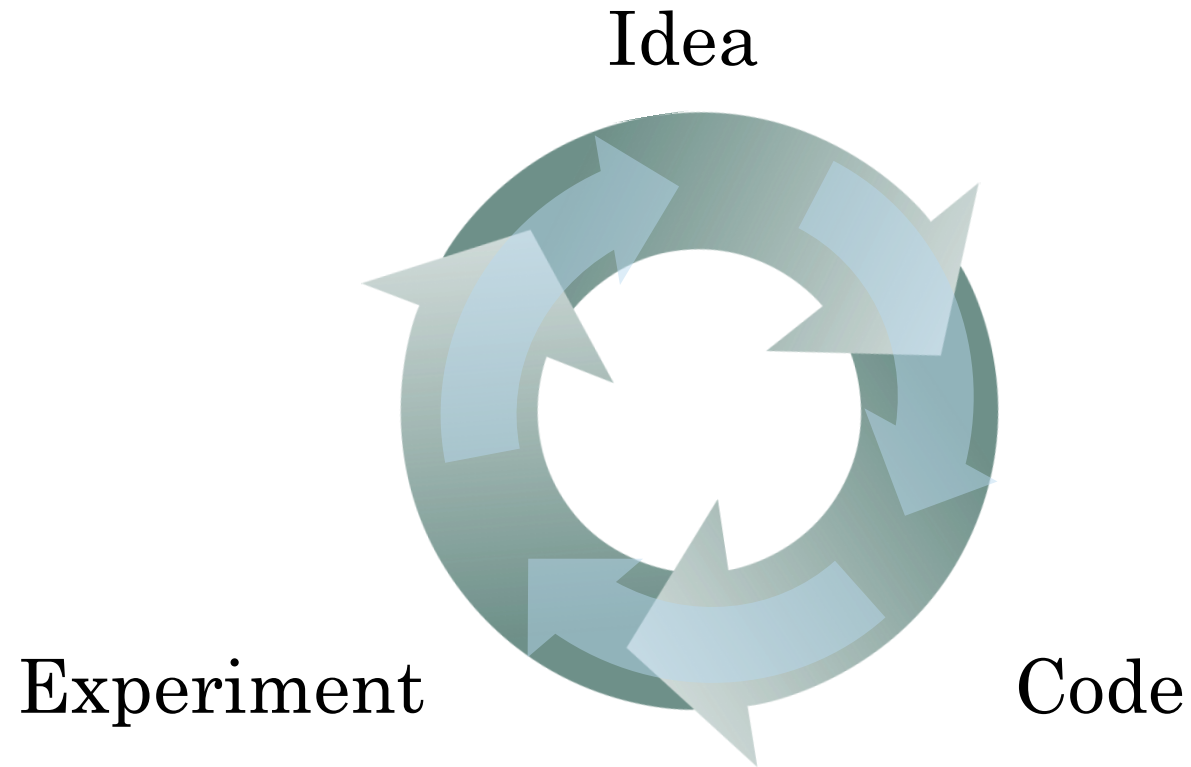

- NLP, Vision, Speech, Ads, logistics, ...

- Intuitions do get stale. Re-evaluate occasionally.

Retesting or reevaluating your hyperparameters at least once every several months to make sure you're still happy with the values you have.
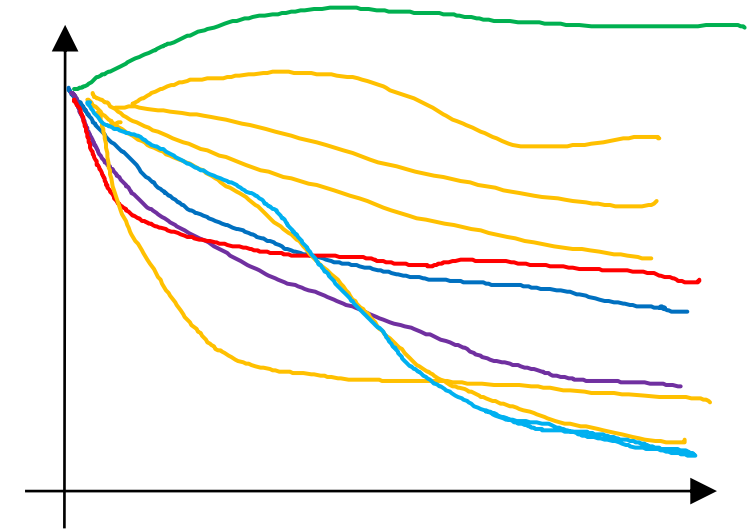

Andrew Ng

Babysitting one model

But that's usually what happens if you don't have enough computational capacity to train a lot of models at the same time

day 0   day 1   day 2

Panda

Training many models in parallel

The other approach would be if you train many models in parallel.
